

Fig.2. Effect of moisture content on surface structure of cv. Eser, A: Moisture content of 8.09% d.b., B:16.59% d.b., C: 23.85% d.b., D: 35.63% d.b

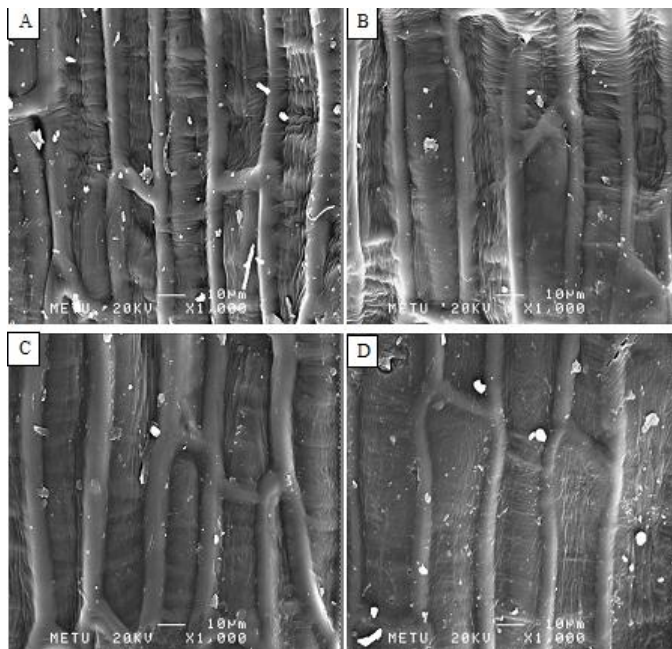

Fig.3. Effect of moisture content on surface structure of cv. Fuatbey-2000, A: Moisture content of 7.71% d.b., B:15.79% d.b., C: 23.59% d.b., D: 34.90% d.b.

#### IV. CONCLUSION

As seen from the scanning electron microscopy images, both surfaces structures of wheat cultivars were different from each other and surface structures of cultivars were visibly changed depending on moisture content levels.
